

Adding Precision For Proximity Zone

For extra sharp precision, try it with your 2 feet up on a target at your side.

Teach the behavior as described in adding a cue to Proximity Zone, but with the target next to where you want your dog's feet.

- Strategically toss reset cookies at angles that help the dog find the position for the next repetition. The cookie tosses can become harder as the dog gains confidence in the correct position.
- Fading out the target.
 1. Have the dog return to the target for 3 repetitions.
 2. On the 4th repetition pick up the target as your dog is finding his reset cookie. Can your dog find position without the target?
 3. Ping pong with and without the target until dog is confidently finding the correct position without the target.
