# NAD+

## Nicotinamide Adenine Dinucleotide

---

Fight Aging + Neurogenitive

### OVERVIEW

NAD and NAD+ occur naturally in the body. They play a major role in the chemical process of generating energy. NAD+ is probably the most important co-factor for improving mitochondrial function. Mitochondria are the intracellular organelles (a.k.a "energy powerhouses") where micronutrients are converted to energy-rich ATP molecules for the cell. NAD helps the liver break down fats that are essential to provide energy for the body. Boosting NAD+ may help manage a wide spectrum of diseases ranging from diabetes to cancer. When NAD is given intravenous, some research shows that it can improve:

- Mental Clarity
- Alertness
- Concentration
- Memory

# Vitamin B12

---

Intramuscular injection

## OVERVIEW

Vitamin B-12 plays an essential role in red blood cell formation, cell metabolism, nerve function and the production of DNA.

Food sources of B-12 include poultry, meat, fish and dairy products.

Those who follow a vegetarian or vegan diet may be prone to deficiency as plant foods don't contain B-12.

Older adults and those with digestive tract conditions that affect absorption of nutrients also are susceptible to vitamin B-12 deficiency.

## HEALTH BENEFITS AND + INDICATIONS FOR USE

- Boosts energy
- Improves Memory
- Improves Mood
- Reduces risk of macular degeneration
