

# Case Study

**Solids.....Odor**

## **Rolling Rock Farm**

Rick & Cheryl Bennish  
Farmland Contractors

### **FACILITIES**

Rick & Cheryl Bennish contract feed in Akron, Colorado with two 1,000-head pull plug buildings draining to an outside earthen basin.

### **PRE-TREATMENT ENVIRONMENT**

Solids weren't draining from the pits as well as they had when the Bennischs first started, but there were especially unhappy with the odor from both the buildings and the outside basin.

### **PITCHARGER ENVIRONMENT**

Rick reported that within 60 days the pits were flowing like they were new. Biological activity in the outside basin started with the first pull cycle.

### **IN CONCLUSION**

**"I had used a number of other products at one time or another and never had the results I'm getting with PitCharger. Odors in both the buildings and my outside pit are minimal and the manure flows easily out of the buildings."**

In addition Rick says, "I've got lots of others things to do around here. I really like the Au-toShip plan. When the PitCharger arrives each month it reminds me it's time to treat the pits."
