

Intelligent Next-Generation Utilization Management

- > Ensure appropriate care
- > Streamline & automate authorizations
- > Reduce administrative cost
- > Unify clinical decision support, documentation and workflow

Through automated support of multiple payer workflows, CareIQ for Health Cloud helps insurers transform the pre-authorization process including speeding staff access to decision support knowledge. MCG benchmarks are presented in an interactive and actionable way for workflow automation and analytics.

- Automates authorizations, representing a 72% cost reduction¹ opportunity
- Supports appropriate levels of care delivery, the right length of hospital stay, and reduces unnecessary hospital readmissions
- Saves physicians' time by automating Medical Director review tasks, including letter generation
- Provides insights into hospital metrics to measure and track variations in length of stay and readmission rates using Milliman benchmarks
