The Champ series reverse osmosis units are the most versatile in the PuROMax line. Every Champ unit is built and tested in our Florida factory. We not only test our units for leaks, we also test for function. Every Champ model is filled with air at 130 psi. and is tested for leaks, auto shut off function, check valve function, and drain control function. This insures that you get a system that not only is leak free, but works.

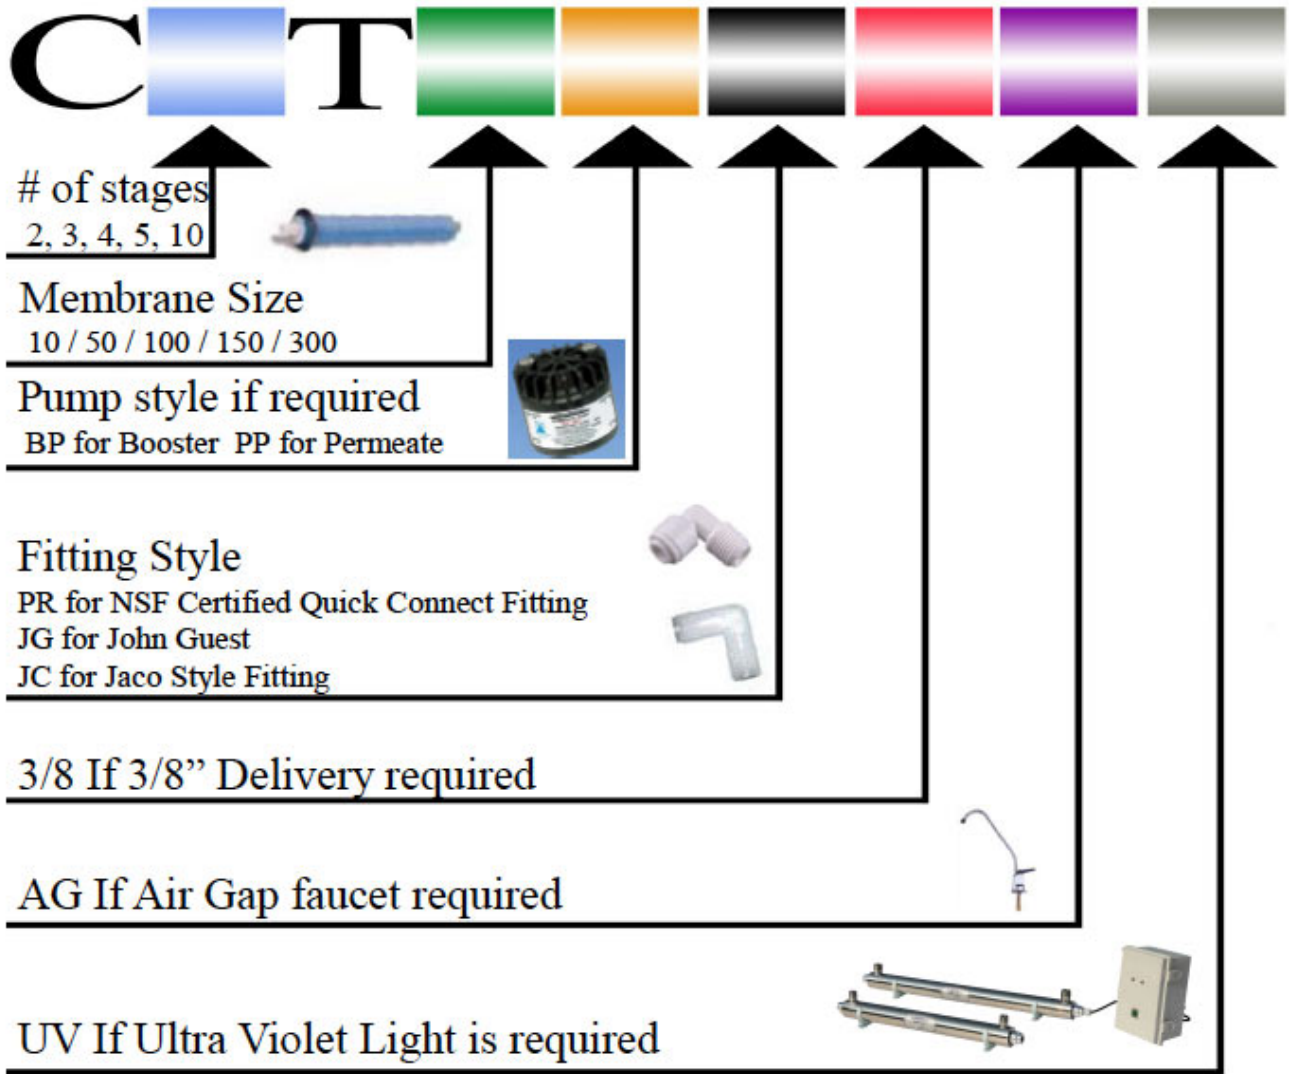

We make quality, clean water affordable.

The quality of drinking water is on everyone's mind today. Bottled water sales have skyrocketed. Bottled water is expensive, inconvenient and of questionable quality. How do you get quality water from your own refrigerator and ice maker? How do you get quality water without breaking the bank or your back?

Puromax Delivers

- Quality Water that exceeds most bottled water quality!
- Quality Water for only pennies a gallon.
- Quality Water right at your fingertips.
- Quality Water for ice and prepared beverages.
