Response from
Smithsonian American
History Museum

“The floors look amazing! We can’t believe that’s the actual color of the floor.”

NeverStrip®
21st Century Floor Care Technology™

A Historic Setting. A Modern Approach to Floor Care.

Recently, ECO Interior Maintenance introduced the Smithsonian American History Museum, located on the National Mall in Washington, D.C. to the idea of moving away from high-maintenance floor finish to NeverStrip Stone, Terrazzo, and Concrete Seal for 15,000 square feet of terrazzo.

Justin Eader, of ECO Interior Maintenance informed the facility of newer and better technology that lasts longer, greatly reduces scrub and recoats and eliminates stripping altogether, which would immediately address the high-demands and lack of manpower issue, to maintain the acrylic floor finish.

Justin tells NeverStrip, “The Micron Sealer application was the easy part. The guys love applying your Sealers” The hard part was removing the years of accumulated floor finish. Once the removal was complete the terrazzo was then pad-polished up to an 800 grit, followed by three applications of Stone, Terrazzo, and Concrete Seal and burnished on the final application with NeverStrip’s 8000 grit burnish pad.

ECO Interior Maintenance is recognized as a premier commercial cleaning company serving Washington D.C., Baltimore and Northern Virginia. Locally owned and operated, specializing in commercial carpet cleaning, upholstery cleaning, hard surface floor care, tile & grout cleaning, wood floor maintenance, stone care, and detailed high-touch cleaning services. For nearly 40 years, they have helped offices, law firms, corporate facilities, and commercial properties maintain clean, healthy, and professional environments throughout their service region.
