Response from  
Bill Q., Facility Manager:

**“Now, this is  
what I wanted  
all along.”**

## Janitorial Management, Inc. turned a dirty facility floor into a thing of beauty.

**Janitorial Management, Inc.** replaced a white rubber floor within the office space of a Pennsylvania industrial facility using the NeverStrip Micron Polishing of Concrete System™.

**The facility manager** was not happy with a recently installed white rubber floor in the break room and hallway. Bill said, “the floor constantly looked dirty from the production area’s black soot. The time and effort to clean the floor each night with a Kaivac machine and Profi cleaner takes too long, costs too much and becomes instantly dirty, as soon as a person walks on the floor.”

**Carl Fisher**, JMI’s Regional Field Manager said, “the NeverStrip Micron Polishing System with “Black” concrete stain was a perfect solution. It provides a durable, easy to clean, easy to refresh solution. The ‘black’ stain provides an attractive design element and hides the soot tracked in from the plant.”

**For more than two decades**, Janitorial Management, Inc. has been a leading provider of cleaning services throughout the Delaware Valley. Contact Carl Fisher at 855-564-2532 and [carl@jmicleans.com](mailto:carl@jmicleans.com).
