

Microbot Floor Finish Eliminator™

Microbot Floor Finish Eliminator™

Product Description

NeverStrip Microbot Floor Finish Eliminator is a NeverStrip 21st Century Floor Care Technology, which radically changes how floor finish/wax/polish is removed from all types of resilient and non-resilient floors.

Microbot Floor Finish Eliminator uses naturally occurring microbes in a proprietary mixture to quickly break down and convert floor finish/wax/polish into water and carbon dioxide.

Microbot Floor Finish Eliminator is ready-to-dilute with **Cold Water**. The NeverStrip Microbot product removes up to 10 coats of floor finish/polish more quickly; more effectively with far less labor and time than by conventional, high pH, floor finish strippers.

Unlike conventional strippers, which remove floor finish like peeling an onion, one pass of Microbot Floor Finish Eliminator **often eliminates 10 coats or more of floor finish.**

Microbot Floor Finish Eliminator converts floor finish into water and carbon dioxide. This process keeps the floor wetter longer, which allows for a more productive process completing, larger area of floors per diluted solution.

Packaging

- Quart (32 oz.)
- Gallon (128 oz.)
- 5-gallon (640 oz.)

Coverage

Coverage of 400 - 1,000 square feet per gallon of mixed solution is typical. Coverage per gallon is largely subject to the number of coats of floor finish to be removed.

NeverStrip recommends a Pilot area be completed to confirm the spread rate of diluted Microbot Floor Finish Eliminator (at 1:1 ratio of Microbot with water) which is needed for desired removal of the floor finish.

Characteristics

- Low to no odor; pleasant aroma
- Attractive traction during use
- Water based
- Diluted 1:1 with **cold water**
- Do Not freeze - thaw stable
- Compatible with NeverStrip Micron Sealers
- Do not mix or spray with Hot Water
- Less than 50 g/liter VOC
- MicroBot Floor Finish Eliminator increases the efficiency and longevity of stripping pads as floor finish is converted to foam/liquid and does not collect on or gum up pad fibers.

Process:

- **Shake the product container well** before use.
- Mix 1:1 with **cold water**
- Spray the mixed Solution onto the floor with a pump up sprayer liberally overlapping the sprays, or apply the solution with a traditional mop.
- Apply Microbot Floor Finish Eliminator at the desired coverage of 400 - 1,000 sq. feet per gallon. The spread rate should be based on the # of coats of floor finish to be removed. Generally, apply at 400 sq. feet per gallon when the floor has 10 or more coats of floor finish.
- Scrub or agitate the floor immediately with a rotary machine, ideally using a medium bristle brush. If a brush is not available, use a green scrubbing pad.
- Wait 15-30 minutes depending on the # of coats of floor finish to be removed.

Microbot Floor Finish Eliminator™

Process continued:

- The Microbot technology converts floor finish into water and carbon dioxide. This process greatly reduces/eliminates the Solution drying, which is always a concern with traditional floor finish stripping. Consequently, larger areas can be stripped at a time than with traditional/conventional strippers.
- Scrub the floor again after 15-30 minutes with a black stripping pad.
- Look for a “white beer-like foam or froth” on the floor indicating that the floor finish is being transformed into water and carbon dioxide.
- Add defoamer, as needed, to the reuse tank of a wet vac or auto scrubber and extract the solution from the floor.
- Rinse the floor with water and extract.
- No need to neutralize.
- Inspect the floor for any remaining floor finish and as needed, locally repeat the process.
- Rinse equipment with clean cool tap water, as needed.

Storage

- Close the container tightly after each use.
- Store in original container only away from direct sunlight.
- Storage and use temperatures are 45°F and 120°F (4° and 49°C).
- Shelf Life 2 years in original unopened container.

Caution

- Do not use outside of temperature range
- Do not spray or use Hot water
- Do not swallow or ingest; seek immediate medical attention
