night and day
difference in
the traction!”**

NeverStrip®
FLOOR COATINGS

21st Century Floor Care Technology™

Master Craft Floors fixed a slippery situation at a fitness club pool with Liquid Grip!

Cleaning

After application

A fitness club in Canton, Michigan had an indoor pool deck that was slippery, and a possible hazard to members.

Master Craft Floors was hired to improve the surface traction of the 2" x 2" mosaic tile. A two person team first cleaned the surface with a square scrub pad and NeverStrip Deep Clean. They then applied NeverStrip Liquid Grip, a member of NeverStrip's Micron Family of 21st Century Floor Care Sealers, to the entire 2,500 square foot area.

NeverStrip Liquid Grip has been engineered for use on any hard surface flooring including: Ceramic, Porcelain, Stone, Terrazzo, Concrete and Vinyl. This two-step process starts with a fine aggregate solution applied by roller, followed by an application of part 2 to lock in the aggregate. Liquid Grip is used in wet environments such as: shower floors, locker rooms, restrooms with showers or tubs, indoor or outdoor pool decks, and patios

The owners of the fitness club were thrilled with the results. No slips or falls have been reported since the application of Liquid Grip. And the entire application process only took 4 hours, meaning little downtime for the club.

Master Craft Floor's professional team are employees of Master Craft Floors, from management to installation, office to field, and hold each other to the highest standard. They meticulously self-perform every job. They offer service and maintenance contracts for the life of your floor, existing flooring restoration, and deep cleaning with state-of-the-art technology.
