21st Century Floor Care Technology™

### Revolutionary Micron Shield Products

NeverStrip is pleased to announce the 2026 introduction of its Micron Shield product line. Micron Shield products are for Hard and Woven and Carpet Surfaces. Micron Shield is truly based on 21st Century Technology, providing unparalleled stain repellency without Solvents or PFAS Chemicals. Micron Shield does not change the appearance of the surface in any way, while delivering ongoing elimination of odors through its patented, hydroxyl radical technology.

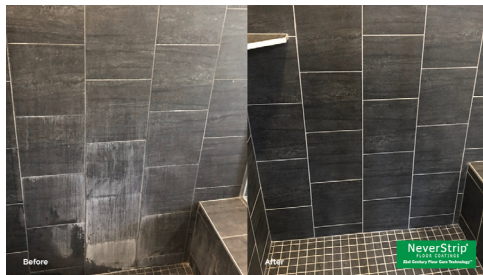

### Resin Seal for Epoxy and Resinous Flooring

Resin Seal is applied to resinous flooring such as epoxy or epoxy with a urethane coating. Traditionally, scratched resinous floors required costly re-coating, aggressive surface abrasion, and long dry times. Resin Seal eliminates that need with minimal surface prep, a 10-minute dry time, lower cost, and a faster, easier refresh.

### Micron Sealers' with Lower Satin Sheen (Almost Matte)

In 2013, NeverStrip introduced Micron Sealers with a Satin Sheen, which can be burnished for higher gloss. A Lower Satin Sheen version of Micron Sealers was introduced during 2023. The Lower Satin products may soon become our most popular product. The Lower Satin Sheen Micron Sealers are particularly popular for wood, stone, rubber and LVT surfaces.

### Shower Walls

Nearly 3 years ago a customer with disgusting Hard Water Deposits on glass and black porcelain shower surfaces decided to deep clean and apply Tile Seal. Thirty months later, the Hard Water Deposits have not returned. Opportunities abound in hospitality, residential, health care, education and fitness facilities.

### Pavers

Traditional Sealers for pavers often have less than exceptional Performance and/or have been Solvent/ PFAS based. Stone, Terrazzo & Concrete Seal applied onto pavers has “superb” indoor and outdoor performance; and is solvent/PFAS free. Pavers are everywhere. The paver market is not a minor opportunity with Micron Sealers.

### Microbot Grease Eliminator Microbot Floor Finish Remover

Microbot products quickly and cost effectively convert restaurant and hydrocarbon greases and restroom uric acids into water and carbon dioxide. Microbot Floor Finish Remover greatly reduces the time, labor and costs required to remove floor finish/wax by replacing high pH strippers.

### Wood & Cork Seal

NeverStrip and its customers have learned in recent years that Micron Sealers have significant values applied onto wood surfaces, as compared to traditional urethane coatings: Wood & Cork Seal has far less dry time; less labor and is dramatically more refreshable at less cost than urethane coatings.

### NeverStrip Family of Diamond Pads

NeverStrip has an extensive, in-stock Family of “Best in Class”, diamond encrusted pads of all sizes to:

- 1) Prepare surfaces prior to Micron Sealer applications,
- 2) Provide ongoing refreshability to the Micron Sealers and
- 3) for burnishing of Micron Sealers when higher shine is desired.
