

Micron - Grind, Densify, Seal & Burnish

System: Micron - Grind, Densify, Seal & Burnish

Products: Densi-Prime* & Stone, Terrazzo and Concrete Seal

(*Densi-Prime is only used with cement-based surfaces)

Surfaces: Stone, Terrazzo, Concrete

NeverStrip System Application Process

1. Diamond Tooling with Planetary Grinder:

- Use a planetary machine with diamond tooling.
- Finish with 150 hybrid or 200/400 resin diamonds.

2. Dust Removal:

- Remove all dust created by the planetary machine.

3. Apply Densi-Prime:

- Apply [NeverStrip Densi-Prime](#) at a rate of 1,500 sq. feet per gallon.
- Wait 20 minutes.

4. Second Application of Densi-Prime:

- Apply a second coat of Densi-Prime and wait 20 minutes.

5. Apply Stone, Terrazzo & Concrete Seal

- On highly reflective surfaces, NeverStrip strongly recommends the use of the 3M Microfiber Applicator Pad
- Two Applications:
 - Spread rate: 4,000 - 5,000 sq. feet per gallon/application.
 - The first application may have less coverage per gallon.

Application methods:

Use a quality [Microfibre Spray Mop Applicator](#) (using [this method](#)) or a standard garden pump sprayer with a dripless brass tip.

- Pre-dampen the microfibre pad with the sealer before application.
- If using a pump sprayer, spray just ahead of spreading.
- Avoid too much product; if the product appears white, it is over-applied.
- Avoid “playing” with the sealer too much.
- Do NOT pull the product from one section to another.
- Spread product onto adjoining sections by a couple of inches to avoid skips.
- Allow 10-15 minutes for drying before applying the next coat or resuming typical commercial traffic.
- Allow 25 minutes of dry time if burnishing the last application.

Caution:

- Keep water off the floor for 8 hours.

Post-Application Maintenance:

- Scrub the floor with a red pad and Micron Clean (2 oz./gallon of water), then burnish during the first 1-2 weeks to remove marks/scuffs/surface scratches from the sealer during its initial curing.
