

NeverStrip Floor Coatings gave BWI a top flight, sustainable floorcare solution.

The Baltimore/Washington International Thurgood Marshall Airport (“BWI”) has been using the NeverStrip Stone, Terrazzo & Concrete Seal on 508,000 sq. feet of terrazzo flooring for nearly 5 years. All of the terrazzo at the airport has been sealed with the NeverStrip Micron Sealer except the restrooms and concession areas, which are managed by a third party.

It is estimated that BWI has saved \$300,000 per year by not having to purchase floor finish, stripper and related supplies. The Airport has said, “**BWI now has a more sustainable floor care paradigm,**” which was made possible by using NeverStrip’s 21st Century Micron Floor Care Technology and Products.

Process used for the past 5 years:

- Floor finish was removed
- The terrazzo flooring was “honed” to a level floor
- The terrazzo was polished to a desired grit
- Two applications of Stone, Terrazzo & Concrete Seal were applied quickly, given the sealer’s 10-minute dry time
- Ongoing cleaning and maintenance consisted of:
 - Dust mopping and auto scrubbing daily
 - Burnish 2-3 times per week in high traffic areas
 - Burnish 2-3 times per month in lower traffic areas
 - Annual scrub and application of Stone, Terrazzo & Concrete Seal in moderate to low traffic areas of the airport
 - Annual scrub and 2 applications of the sealer on high demand flooring such as baggage claim, entrances and airline counter areas

No more stripping has been needed or anticipated!

NeverStrip Floor Coatings is a manufacturer of 21st Century Floor Care Technology. The NeverStrip Micron Sealers are being used across North America on ALL types of non-carpet flooring. Our products are ideal for even the most demanding commercial facilities.
