Response from  
customer:

**“We’re very happy with  
the results. It looks  
better than it did when  
it was new!”**

# T.V.S. Floor Coatings & Restoration can restore more than floors.

**Jackson Hole, Wyoming** home owners were having big problems with their stone kitchen countertop. Glassware was leaving water marks on the beautiful leather finished granite. Both the home owners and outside cleaning companies tried and tried but could not get the water marks to go away. More and more water marks were appearing all the time. The home owners were expecting to replace the granite at a substantial cost. Then, T.V.S. Coatings and Restorations was called. Shelby and Jim inspected the surface. They recommended a deep cleaning and restoration using the proven Micron products from NeverStrip Floor Coatings.™

**The T.V.S. team** began by using NeverStrip Deep Clean™ to pull out the water marks with the NeverStrip Diamond Encrusted Pads. This process also buffed out scratches which had developed over the years. A final step used NeverStrip Stone, Terrazzo and Concrete Seal™ to seal and protect the stone surface from stains including water marks.

**One year** after treating the countertops, the T.V.S team returned to examine the granite. The countertop looked great. No water marks! The home owners are pleased and more than satisfied with the restoration. They now find the granite easier to clean and are really pleased the countertop did not require replacement.
