Micron Sealer Technology

Micron Sealers are based on patent protected 21st Century Floor Care Technology. These largely inorganic-based sealers were introduced during 2013 to the North American floor care maintenance market. The sealers are being used on essentially all types of non carpet flooring. Thousands of applications have been completed and are being maintained within a wide range of demanding commercial facilities. The Micron Sealers provide: an Attractive Appearance, Long Lasting Performance, Cost-Effective Refreshability, Easy Maintenance; Less Floor Care Costs and Fewer Required Labor Hours.
