Bob Lee:

**“I have been working
with the NeverStrip
Micron Sealers
for 10+ years. They
are simply the best
concrete sealers that
we have ever worked
with - Period!”**

NeverStrip®
FLOOR COATINGS

21st Century Floor Care Technology™

This concrete looks 200 years old—and performs like it's brand new.

Robert E. Lee & Son's, a Chicago-area, third generation concrete contracting company, was asked by a client to create an outdoor concrete space for a new restaurant. The customer did not want just a typical concrete floor. The restaurant owner asked that the concrete look like a 200 year old European Brick surface, at a price closer to concrete.

The Before and After pictures show the finished appearance on a portion of the project. Everyone, including most importantly, the restaurant owner, loves the look and ALL agree the stamped concrete has an old European brick appearance.

The Micron Sealer applications were done at 54 F temperature, 5-7 days after the concrete was poured. The two applications were: NeverStrip Densi-Prime followed by Stone, Terrazzo & Concrete Seal - Lower Satin Sheen.

The Micron Sealers have not only produced an outstanding “rich” appearance but will provide the restaurant with a safe, easy to clean and maintain flooring surface for years to come.

Robert E. Lee & Son's Concrete is a third generation concrete installer in the Chicago area. Bob Lee can be reached at 708-362-0131 and relconcrete13@aol.com.
