Transforming Tired Rubber: NBS Commercial Interiors delivers a Case Study in Floor Renewal.

Before

After

An Automotive supplier in Farmington Hills, Michigan had rubber flooring in several stairwells that gave them problems. The floors had become white and chalky. It looked like water was being tracked in from the door, leaving a residue of salt and grime.

A team from NBS Commercial Interiors did a traditional clean and strip process. They used a product called Green Strip at a dilution of 4-1. This product is not too aggressive and won't burn or damage the floor. The stripper dwelled for 30 minutes. After that, the floor was scrubbed with a brush and a wet vac wand was used to extract the water. The floor was then rinsed thoroughly before applying two applications of **NeverStrip Rubber Seal**.

The client was impressed with the final outcome. The flooring had been severely deteriorated in appearance, but with NeverStrip Rubber Seal it now looks as good as new. The floor is also now much easier to clean and maintain.

Regardless of the type of flooring NBS Commercial Interiors is working with, they know exactly how to keep your floors looking their best. Whether your space has carpet or hard surface flooring, they can customize maintenance programs tailored to your facility's needs and budget. Their Commercial Cleaning Solutions team not only keeps your floors looking great, but also helps to create a healthier, better-looking workplace.
