FDA Finally Admitted That Chicken Meat Is Filled with Cancer-Causing Arsenic

David Ger January 8, 2017 Health 13 Comments

According to the Associated Press, the FDA stated that chicken sold on the markets across USA are fed with inorganic arsenic, a detrimental chemical for human health. It's given to chicken because it causes quicker weight gain and less feeding. It's also given to turkeys, hogs, and chickens for enhanced color.

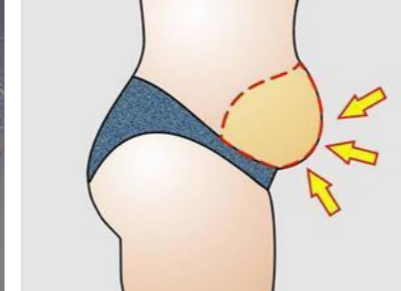

10 broiler chickens were tested by the FDA and all of them had inorganic arsenic in their liver. However, the agency continues trying to convince people that the amount of arsenic in chicken is very small and thus, the meat is safe for consumption. Nonetheless, we shouldn't be fooled by such statements as arsenic is a highly toxic substance. In fact, The University of South Carolina Department of Environmental Health Sciences issued a warning about the responsibility of arsenic, lead, and mercury for fetus damage.

What's more, arsenic is 4 times more poisonous than Mercury. Believe it or not, the trivalent Arsenic is 60 times more toxic than the pentavalent Arsenic. A research published in the Journal of the American Medical Association pointed out that people who consumed large amounts of arsenic rice, without any other known arsenic exposure, had cellular changes which can lead to cancer.

Additionally, it has been proven that when ingested; arsenic can lead to invasive squamous cell carcinoma, Bowen illness, basal cell skin carcinoma, and liver, kidney, lung, and bladder cancer.

This is an unfounded rumor from 2011. What DID happen was the FDA announced in 2011 that Pfizer was pulling a feed additive that contained small amounts of arsenic... So the article is almost six years old and the number of chicken (their livers) containing traces of arsenic were tiny and the amount tiny... None the less DON'T eat ANY animals as they are feeling sentient beings. THAT is the truth

The world over needs God's re-intervention to save mankind
Reply

richard - January 23rd, 2017 at 2:05 pm
if God intervenes and u do things u wouldn't normally do because of it,that would be taking away ur free will to do what u please.that's not what Gods about,he wants u to have free will and if it is doing evil things and winding up in hell so be it.but I don't think turning vegan and not eating meat is going to save ur soul any more than eating meat is going to.its not a sin to eat meat,its a sin to feed animals poison that u know is going to hurt them and ur fellow man.

Why even take that risk? Just stop feeding your loved ones poison and yourself.its not even necessary to live, its the opposite. Do plant protien, cholesterol free and no harmful side effects. The hospital's could use a break.

The FDA withdrew approval for the last arsenic containing poultry drug as of Dec. 31, 2015, so there shouldn't be any significant levels of arsenic in chickens to worry about now. <http://www.feednavigator.com/Regulation/Nitarstone-no-longer-approved-for-feed-use-in-the-US>

Talk about fake news. It's a shame you wasted the sort of your precious time to post and mine to refute it. FDA never said anything of the part and producers DON'T use inorganic or organic arsenic in chicken feed. They did use acceptable levels along time ago. There was absolutely nothing wrong with it having it in there. They quit because of the stupid articles like this and the misguided public perception of this essential element. Please don't put out this crap and without doing some research. there and a bunch of hard working farmers out there that have it difficult enough without these slanderous posts. <http://www.eagle-min.com/faq/faq94.htm>
Colloidal Minerals: Arsenic as a nutrient
Colloidal minerals: Although most commonly known for its toxic properties, arsenic has been shown to have beneficial actions as a nutritional supplement. Colloidal minerals

Myths. Arsenic is an essential trace element, meaning we need to consume it , our bodies do not make it, and it is required for good health. The earlier studies found only acceptable healthy levels in the study.
