The Facts on Fat

Our body fat goes up
steadily after

age **30**

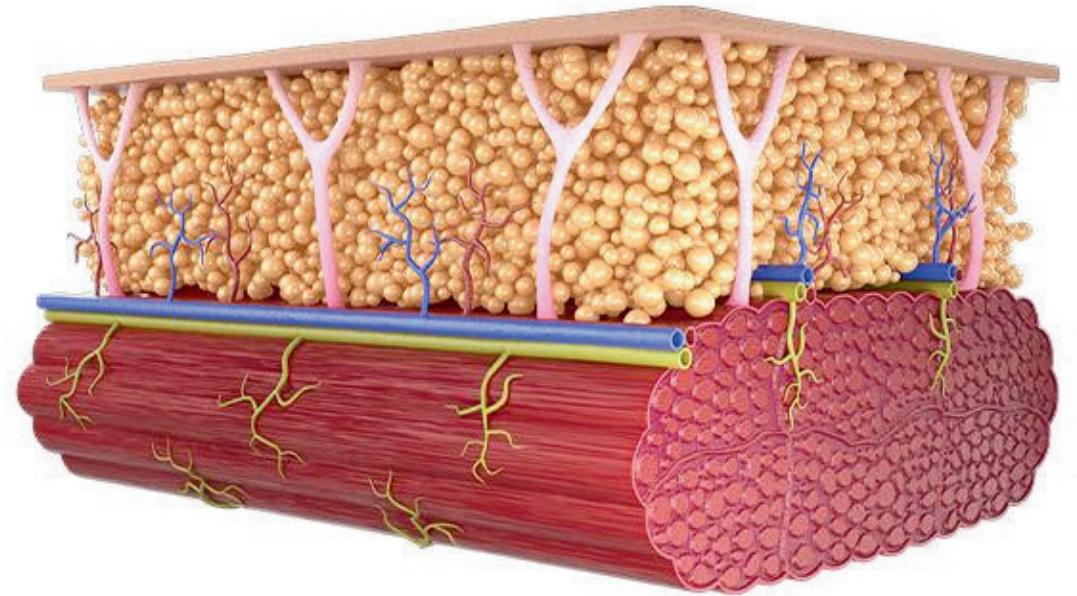

Some blame metabolism,
but muscles are
really to blame.

The Facts on Fat

Metabolism is really a measure of how efficient the muscle cells of our body burn the energy, or calories, we bring in.

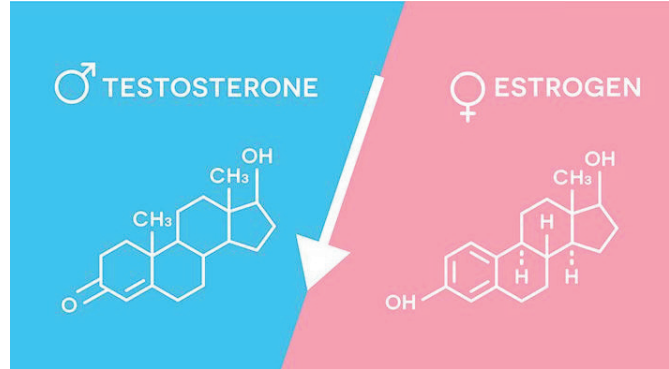

If you keep your caloric intake exactly the same as you get older those unburned calories end up as fat.

The Facts on Fat

Complicating matters, we lose 3-5% of our muscle mass per decade beginning at age 30.*

Muscle mass is naturally impacted by decreases in growth hormone, testosterone and estrogen levels.*

Knowing that any loss of muscle mass will accelerate fat gain. We will all be battling the bulge.*

*Data on file

The Bottom Line

We are all battling the bulge

9 out of 10 men
and 6 out of 10 women are

interested in a fat reduction and or
muscle toning treatment.*

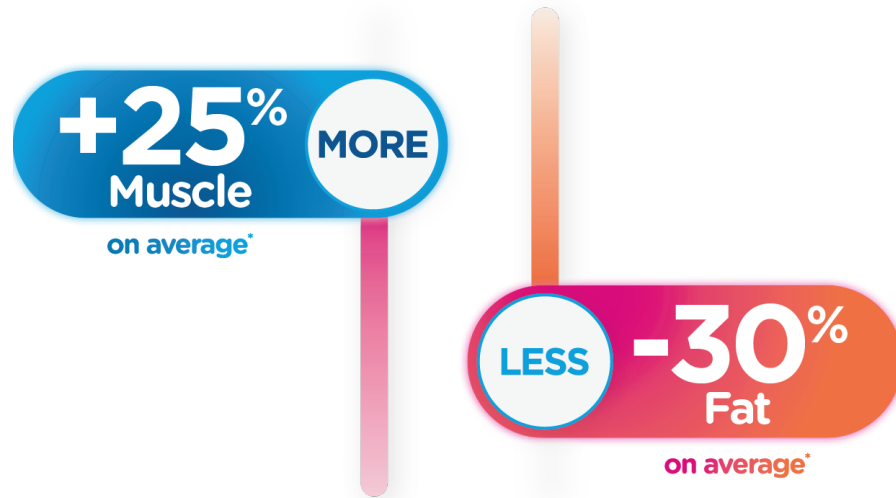

Are you?

Fat Reduction and Muscle Increase: MRI evidence

MRI's don't lie

Client Testimonials

“Let’s face it, we all have busy schedules. What’s so great about Emslim Neo is that it’s the only device to combine two technologies – one for muscle contour and one for fat reduction and I can get everything done at the same time.”

Jennifer
New York, NY

“With Emslim Neo I actually get to see results even though I don’t get to the gym often as I’d like.”

Gretchen
Hoboken, NJ
