

## Superior performance, value and design

Green Source EPC patent pending carports are designed by a talented and experienced team of in-house architects and engineers working with your team to reduce energy costs, enhance the value of your real estate and strengthen your commitment to sustain-ability.

## Realize the energy potential of parking

Green Source long span canopy brings the flexibility of out garage top solution to ground lots. Each structure covers two parallel parking rows and an internal drive aisle using a single contiguous PV-covered canopy, maximizing energy production.

## A track record of success

With more than 100 MW of carport installations nationwide, Green Source knows what it takes to meet milestones, keep your project on schedule and minimize any disruption to your organization.

## Additional Information
