

# INDUSTRIAL PRODUCTS

***Delivering your products with a confirmed, all cost-inclusive quotation.***

Our industrial products encompass a multitude of challenging applications and are manufactured in a wide variety of materials to exact standards. Regardless of whether you need metal alloys, plastic-injection or rubber compression molded parts, we can match you with one of our preferred Asia-sourced suppliers.

We have long-term, solid relationships with the most reliable and trustworthy suppliers in Asia. We fully vet each of these suppliers to ensure they meet our stringent performance and quality requirements before including them as a preferred supplier. Our staff will carefully match your project to the most capable and cost-competitive supplier based on its complexity and quality expectations.

A sampling of the selection of components we offer includes:

- Castings
- Forgings
- Precision machining
- Plastic-injection molded sub-assemblies
  - Fire safety devices
- Steel stampings
- Fasteners

---

## ***Our Pledge to You***

*We will deliver as promised to your complete satisfaction. If we fall short in any way, we'll correct the problem, whatever it takes.*

---

## Castings/Forgings

Produced to meet ASTM specifications. Precision investment castings; larger size and weight sand castings. Forged aluminum and steel components. In our long history providing high-quality castings and forgings, we've matched customers with foundries to meet any required industry or customer specifications in a complete range of finishes.

## Precision Machining

We can create complex, precise parts and assemblies to the most exacting industry standards in a variety of materials, including metals and plastics. These products meet stringent industry specifications and are routinely used as components in CE-, ETL-, API-, ASME-, NSF- and UL-certified equipment.

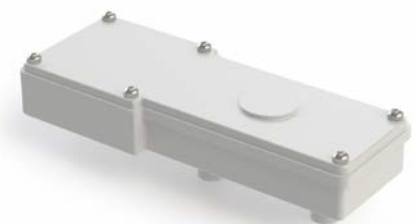

## Plastic-Injection Molding

When you need high volumes of low-cost parts with tolerance, precision and repeatability, our plastic-injection delivers. You can choose from a vast selection of thermoplastics, thermosets and specialized engineered resins based on your needs for strength and function. We can also provide compression-, blow- and roto-molded items.

## Value-Added Sub-Assemblies

When it comes to sub-assembly, customers expect us to reduce the overall product cost without compromising quality. And we deliver. We can handle the intricate assembly processes and low-tolerance thresholds required for precision integration according to your specifications and in compliance with best practices.

We invite you to learn more about UGS and how we can contribute to your continued success and increased profitability.
